Reasons for Allowance

1. The following is an examiner's statement of reasons for allowance:
2. The primary reason for allowance of the claims is based on the inclusion of the elements of *"means (Figure 2, element 72) for determining from the scheduling information (Figure 2, element 70) a start time (Figure 1, element 18) of the broadcast service (Figure 2, element 50) on the channel (Figure 2, element 62); means (Figure 2, element 74) for determining from the scheduling information preparation time (Figure 1, element 20) of the broadcast service that requires transmission on the channel prior to the start time of the broadcast service; and means (Figure 2, element 80) for inhibiting monitoring of the channel at the reception means (Figure 2, element 60) until a time determined by the start time less the preparation time"* in independent claims 1, 4, 11, 12 and of Applicant's remarks received on 20 May 2008 on pages 16-17.

The prior art are silent of these elements as explained below:

3. Lee et al. US 2006/0107287 A1 discloses in figures 7-10 regarding elements of UE and UTRAN that are silent of the element of *"means for inhibiting monitoring of the channel at the reception means until a time determined by the start time less the preparation time"*.
4. Yi et al. US 2004/0105402 A1 only discloses in figure 10 that, *"During a frame which does not corresponding to the stored scheduling information, the terminal group may receive other channels than the MTCH channel for the specific MBMS service. For this purpose, UTRAN may transmit a short message service (SMS) message to an RRC of a certain terminal belonging to the terminal group (step 43). Preferably, UTRAN can*

Art Unit: 2618

transmit the SMS message for a time section available for the terminal to receive at other time than the time section allocated for the specific MBMS service, [0183], [0142]”.

5. Kim et al. US 2004/0087320 A1 only discloses in figures 5, 6 that, *“In step 602 the User Equipment (UE) receives an associated Paging CHannel (PCH) from the Radio Network Controller (RNC) 140. The PCH is transmitted from the RNC 140 a predetermined time after the transmission of the PI set to “ON”. The UE determines whether a TMGI or service ID set in the paging message matches to a TMGI or service ID indicating an intended MBMS service in step 695> If they are different, the UE continuously monitors the Paging Indicator CHannel (PICH) which is retransmitted from the RNC 140 periodically. If they are identical, the UE goes to step 606, [0069]-[0071]”.*

6. Kim et al. US patent # 6,828,408 B1 only discloses that, *“determining, at the mobile station, a broadcast indicator value at an arrival time of the broadcast cycle notified by the base station; periodically checking, at the mobile station, a corresponding common control channel when the current broadcast message will be transmitted; and receiving, at the mobile station, a corresponding broadcast message along with periodically checking the channel totted the broadcast message, (col. 4, lines 1-8)”.*

7. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”

8. **Claims 1, 2, 4, 6-12, 16-18, and 21 that are renumbered as 1-14 are allowed.**
